## Tried and Trusted for more than 85 years

Transformers Manufacturing Company Pty Ltd - the original TMC - was established in Melbourne Australia in 1936 as a manufacturer of oil cooled and dry type transformers.

Following rapid technological developments in the field of epoxy resins during the 1980s, TMC began specialising in vacuum cast epoxy resin transformers.

Over the ensuing decades TMC has evolved as a top tier supplier to both domestic and international markets with products that enjoy a reputation for the highest quality and reliability.

By focusing solely on transformers for more than eight decades, TMC has developed specialist design knowledge and manufacturing expertise in its production plants in Australia and Spain.

The technical and production expertise of TMC Australia and TMC Spain combine synergistically to facilitate the design and manufacture of a broad range of products ranging from standard distribution transformers to complex, sophisticated induction equipment, transformers and reactors, in a highly efficient and cost-effective manner.

## TMC CAST RESIN TRANSFORMERS

### Negligible Partial Discharge

Internal partial discharge, which is a major cause of erosion and failure in insulation system voltages  $\geq 3.6\text{kV}$ , is effectively eliminated in TMC cast resin transformers, significantly extending the service life.

### Environmentally Safe

TMC cast resin transformers contain no liquid to pollute the ground or water supplies and no special measures are required to guard against spillage.

### Fire and Flame Resistant

The resin formulations used in TMC cast resin transformers are self-extinguishing, increasing safety and reducing the risk to people and property in the event of a fire.

### Lightning Impulse Withstand Voltage (BIL)

TMC cast resin transformers are designed to withstand lightning impulse voltages without the aid of surge protection devices.

### High Thermal Conductivity

TMC cast resin transformers are mechanically resistant and thermally tolerant to short term overloads.

### Inherent Superior Dynamic Strength

Increased ability to withstand short circuit is inherent in a cast resin transformer.

### Superior Plant and Manufacturing Practices

State-of-the-art winding machines enable insulation and conductor materials to be wound simultaneously, resulting in a very compact winding, capable of resisting radial and short circuit forces.

A further major electrical advantage over conventional wire or strip windings is that the interlayer voltage never exceeds the individual voltage of each turn. This results in lower internal electrical stress and a more reliable product than that of competitors using inferior wire winding technologies.

### International Standards

TMC transformers are manufactured in Spain and Australia in accordance with strict international and local Standards.

## STANDARD COMPONENTS

### Lifting Lugs

Four lifting lugs are provided on the top core clamps.

### Three-limb Core

The core is manufactured from prime quality, high permeability, low loss, grain oriented ferro-silicon steel laminations, individually coated with high temperature, inorganic insulation. The completed core is treated with a high temperature, electrically stable coating, to prevent corrosion in service.

### High Voltage (HV) Windings

HV windings consist of vacuum cast, fibreglass reinforced aluminium or copper foil. The foil is edge conditioned and wound in continuous discs onto a precision former. This system of winding guarantees the accuracy required for close tolerance casting in precision moulds.

### Epoxy Resin Insulation

The windings are reinforced with fibreglass mesh and vacuum cast in high temperature epoxy resin. The resin ensures the transformer is maintenance-free, moisture-free, tropicalised, flame-resistant and self-extinguishing.

### High Voltage Terminals

HV terminals are available with variable arrangements to permit optimum installation.

### High Voltage Tappings

For off-circuit adaptation to the supply network.

### Low Voltage (LV) Windings

LV windings are produced with aluminium or copper foil covering the full winding length. The foil conductor edges are conditioned prior to winding and each LV turn is insulated with three-ply, resin impregnated high temperature film laminate.

After winding, vacuum pressure impregnation and final oven hardening fully protect the coil from infiltration of moisture.

### Low Voltage Terminals

Tinned aluminium or copper.

### Low Voltage Terminal Insulators

Strengthen LV terminal palms against mechanical forces.

### Resilient Supports

Provide insulation for core and windings against mechanical vibrations.

### Temperature Monitoring

Detectors in the LV winding.

### Bi-directional Metallic Wheels

### Hot Dipped Galvanised Core Feet

## STANDARD CHARACTERISTICS

The following characteristics **are standard for the transformers depicted in this brochure**. Further tailored options and configurations are available upon request.

	STANDARD	COMMON OPTIONS
International Standards	IEC 60076-11	
European Standards	EN 50708-1-1 EN 50708-2-1 EN 50708-3-1 } Tier 2	
European Regulations	(EU) 2019/1783 amending (EU) 548/2014 on implementing Directive 2009/125/EC	
High Voltage Classes	7.2kV, 12kV, 17.5kV, 24kV, 25kV, 36kV	52kV and 72kV
Low Voltage Class	≤1.1kV	≥1.1kV
Frequency	50Hz	60Hz
Vector Group	Dyn or Yyn	Other Vector Groups
Insulation Temperature Class	F 155°C or H 180°C	Class 200
Winding Material	Aluminium	Copper
Installation Altitude	≤ 1000 mamsl	Higher Altitude
Maximum Ambient Temperature	40°C	Higher Temperature
Type of Cooling	AN and AN/AF	AN/WF

## INTERNATIONAL ACCREDITATIONS

ISO 9001  
Quality Assurance

ISO 14001  
Environmental Management

ISO 45001  
Occupational Health and Safety

TMC is listed by Canadian Standards Association (CSA) Group as certified up to 5MVA, 25kV, Class F and Class H insulation, NEMA 3R enclosure. CSA Record No. 271663.

## OPTIONAL ACCESSORIES

Range includes:

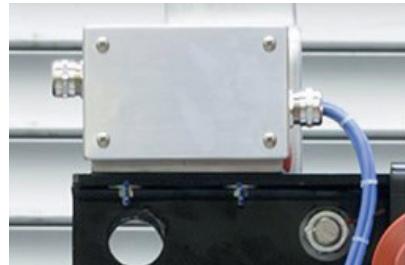

### Temperature Measurement

RTD, PTC, Infrared, Fibre Optic  
Temperature Monitors with  
Analogue, Digital or Ethernet interface

Analogue Temperature Monitors

Temp Measuring Device Marshalling  
Boxes in Stainless Steel or PVC

### Temperature Control

Fixed Speed Cooling Fans

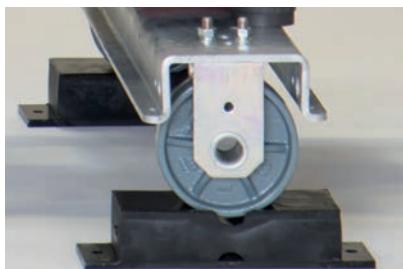

Cooling Fan Controller - Fixed Speed

Variable Speed Cooling Fan System

### Vibration & Seismic Control

Wheel Type Vibration Dampeners

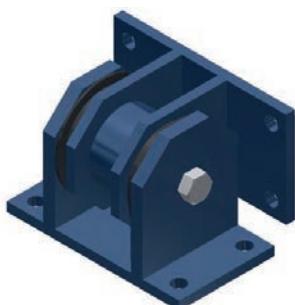

GPO3 Coil Support Blocks

Fixed Type Anti Vibration Devices

Seismic Springs

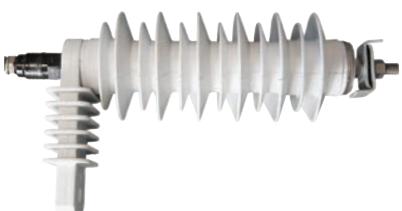

Seismic Snubbers

Seismic Reinforcement

## OPTIONAL ACCESSORIES

### HV Devices

HV Surge Arresters

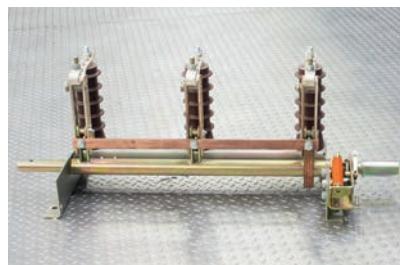

Off-load Tap Changers

On-load Tap Changers

HV Separable Connectors

HV Earthing Switches

HV Bushings

### LV Devices

Customised LV Bussing

LB Busbar Fuses

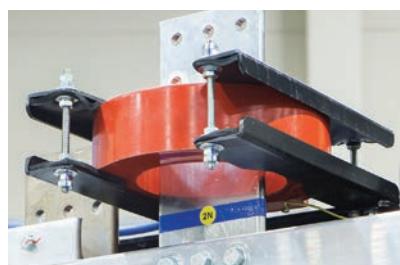

LV Bushings

### Miscellaneous

Earthing Spheres (shown on HV Bushing)

Protection Current Transformers

Measurement Voltage Transformers

## MANUFACTURING OPTIONS

Range includes:

- High efficiency (reduced losses)
- Reduced temperature rise
- Reduced sound level
- Multiple primary voltage windings
- Multiple secondary windings
- Aluminium or copper windings
- Hybrid aluminium / copper windings
- Particular vector groups
- Low voltage / low voltage
- Sealed or cast low voltage windings
- Silicone free
- Enhanced K-Factors (4, 9, 13, 20)
- Variable impedance voltage
- Enhanced insulation levels (BIL)
- Enhanced corrosion protection
- Hot dipped galvanised core clamps
- Seismic reinforcement / springs / snubbers
- Bespoke terminations (bussing)
- Different location options of high and low voltage connection terminals
- Variable speed drives, rectifiers and excitation transformers (6, 12, 18 and 24 pulse)
- Varying coupling factor from 0.15 to 0.9
- Enclosure Protection – see pages 21 to 24

## PACKING OPTIONS

TMC recommends and offers a range of packing options for IP00 and enclosures depending on the destination and freight conditions.

Plastic Wrap on Timber Pallet

Plastic Wrap in Open Timber Crate

Vacuum Bag on Timber Pallet

Vacuum Bag in Open Timber Crate

Vacuum Bag in Closed Timber Case

## LABORATORY TESTING

### Routine Tests – In House

The following routine tests are conducted by qualified personnel at TMC Test Laboratories on all dry-type transformers in accordance with the requirements of International Standard IEC 60076-11 “Dry-type Transformers” and are included in the transformer selling price:

1. Measurement of winding resistance
  2. Measurement of voltage ratio and check of phase displacement
  3. Measurement of short-circuit impedance and load loss
  4. Measurement of no-load loss and current
  5. Applied voltage test (AV)
  6. Induced voltage withstand test (IVW)
  7. Partial discharge measurement
  8. Separate-source AC voltage withstand test of auxiliary wiring\*
- \* Although not listed as a Routine Test in IEC 60076-11, TMC routinely performs this test on transformers with auxiliary wiring.

Listed below are additional tests that can be performed at the request of the customer with price on application:

### Type Tests – In House

- Full wave lightning impulse test (LI)
- Chopped wave lightning impulse test (LIC)
- Temperature-rise test

### Special Tests – In House

- Measurement of sound level
- Harmonic analysis of no-load current
- Zero phase sequence impedance
- Winding capacitance
- Measurement of DC insulation resistance
- Measurement of dissipation factor ( $\tan \delta$ )
- Measurement of frequency response analysis (FRA)

**As part of its ISO9001 certification, TMC laboratories are regularly and independently calibrated to confirm ongoing compliance of the transformer losses and efficiencies defined in EU Ecodesign Regulations.**

### Special Tests – External Laboratories

TMC has a comprehensive library of third party and independently audited special tests confirming the performance and quality of TMC transformers, including:

Climatic Test C2 Environmental Test E2 Fire Behaviour Test F1	CESI Testing & Certification Division, Milan Italy
Climatic Test C2/C3 Environmental Test E2/E3/E4	Tecnalia Electrical Equipment Laboratory, Bilbao Spain
Short Circuit Withstand Test	Tecnalia Electrical Equipment Laboratory, Bilbao Spain Testing & Certification, Sydney Australia
Seismic Qualification	Earthquake & Engineering Laboratory, Bristol UK
Traction Duty Cycle Class IX	Tecnalia Electrical Equipment Laboratory, Bilbao Spain
DNV GL Offshore Standard OS-D201	DNV GL, Oslo Norway

## PRODUCT RANGE

TMC manufactures dry type, cast resin and oil cooled transformers and reactors with power rating up to 30MVA and system voltages up to 72kV Class.

This catalogue describes one TMC range of distribution transformers up to 5MVA and 36kV Class. Further information is available on request for details of TMC induction equipment including the items listed below.

Distribution Power	Welding Submersible	Air Cored Reactors
Rectifier / Inverter (Converter)	Induction Heating / Oven	Iron Cored Reactors
Neutral Earthing	Water Cooled	Current Limiting Reactors
Low Voltage	On Load Tap Changer (OLTC)	Shunt Reactors
Motor Starting Autotransformers	Vacuum Pressure Impregnated	Damping Reactors
Seismic Rated	Phase Shifting	Tuning Reactors
Silicone Free	Substation / Mobile Substation	Smoothing Reactors
		Neutral Earthing Reactors

Visit [tmc.com.au](http://tmc.com.au) for more information regarding the broad range of TMC transformers.

## INSTALLATIONS

TMC manufactures transformers well suited for harsh loads, extreme, rugged environments and wherever safety is paramount. These can be found all over the globe across a range of installations including:

### Civil Infrastructure

- Hospitals
- Education
- Shopping Centres
- Retail
- Stadiums
- Public Buildings
- Hotels
- High Rise Buildings

### Transport

- Mass Transit Trams & Trains
- Fast Rail Networks
- Railway Substations
- Marine Substations with OLTCs
- Airports
- Roads and Tunnels
- EV Fast Charging Stations

### Utilities

- Generation
- Transmission

### Industrial

- Data Centres
- Petrochemical Plants
- Light and Heavy Manufacturing
- Processing Plants
- Pulp and Paper Plants
- Cement Factories
- Scientific Installations

### Mining

- Underground
- Aboveground
- Infrastructure
- Oil and Gas
- Shovel Duty

### Sensitive and Extreme Environments

- Nuclear Plants
- Seismic Locations
- Heavy Mechanical Vibrations
- Desert / Subzero / High Humidity
- Extreme Altitude

### Renewable Energy

- Solar farms / Photovoltaic
- Thermosolar
- Wind farms
- Hydroelectric
- Cogeneration
- Biomass
- Wave

### Marine and Offshore

- Water Treatment
- Reservoirs
- Desalination Plants
- Sewerage Treatment Plants
- Ports
- Shipping
- Offshore Platforms
- Offshore Wind Farms

### Military Structures

- Naval dockyards
- Aerospace Installations

## EUROPEAN ECODESIGN REGULATIONS

### Ecodesign Requirements

European Commission Regulation (EU) 548/2014 was enacted on 21 May 2014 to implement Directive 2009/125/EC of the European Parliament and of the Council regarding small, medium and large power transformers.

Regulation 548/2014 mainly covered minimum energy efficiency levels of transformers with a minimum power rating of 1 kVA that are used in 50 Hz electricity networks or in industrial applications.

Under mandate from the European Commission, the European Committee for Electrotechnical Standardization (CENELEC), acting as the responsible authority for European standardisation in the area of electrical engineering, promptly released a set of manufacturing Standards. These practical Standards incorporated, inter alia, the requirements of Regulation 548/2014.

European Standard EN50588-1:2015, was released in June 2015 to cover 50Hz medium power transformers with highest voltage for equipment not exceeding 36kV. European Standard EN50629:2015, addressed transformers with voltage above 36kV and power above 40MVA. Both documents promulgated energy performances with TIER 1 applicable from 1 July 2015 and an improved TIER 2 applicable from 1 July 2021.

CENELEC duly released a revised set of replacement European Standards in May 2020 superseding EN50588:

- EN50708-1-1:2020 (Common Part – General Requirements)
- EN50708-2-1:2020 (Medium Power) replaces EN50588-1:2015 for power  $\leq$ 3150kVA and system voltage  $\leq$ 36kV
- EN50708-3-1:2020 (Large Power) replaces EN50629:2015 for power  $>$ 3150kVA or system voltage  $>$ 36kV

**TMC transformers described in this brochure are designed and manufactured to comply with Ecodesign TIER 2 loss and efficiency standards prescribed in CENELEC Standards EN50708 (all Parts) which give effect to European Commission Regulations.**

### TMC DATA TABLES

The following tables depict typical data for the TMC range of distribution transformers specifically designed to comply with EN50708.

The tables are broadly classed according to Maximum System Voltage Um and have the following features:

- Data for commonly used 4% Impedance value for power ratings up to 630kVA
- Data for Impedance value of 6% for power ratings up to 3150kVA
- Data for Impedance value over 6% for power ratings above 3150kVA up to 5000kVA
- Sound Pressure Lp(A) and the corresponding Sound Power Lw(A) levels
- IP00 dimension references relating to IP00 drawings on the foldout page 24 Technical Details, together with Terminal dimensions and drawings
- Enclosure Types with corresponding reference data on page 22 Indoor Enclosures and page 23 Outdoor Enclosures

In relation to transformers, the Regulations impose specific, as distinct from generic, ‘Ecodesign’ requirements for the integration of environmental aspects into transformer design, with the aim of improving the environmental performance of the product throughout its whole lifecycle.

These specific requirements clearly impose a quantified and measurable efficiency requirement defining upper limits on energy consumption during use, as calculated for a given unit of output performance. In this way the Regulations, as distilled into the Standards, continue to push the EU transformer market towards world leading efficiencies with consequent reductions in lifecycle costs of ownership.

After five years, as required by European law, Regulation 548/2014 was reviewed in 2019. The study confirmed a positive effect on the Global Warming Potential of the TIER 1 efficiencies of power and distribution transformers being placed on the market. A replacement Regulation (EU) 2019/1783 was enacted on 1 October 2019 with amendments to EU 548/2014 and mandating compliance with the improved TIER 2 levels of efficiency.

## TMC ENCLOSURES

TMC enclosures for use **indoors** are ventilated and conform to ANSI/IEC Standard 60529:2020 Degree of Protection IP20 up to IP33.

TMC enclosures for use **outdoors** are either ventilated or sealed and conform to ANSI/IEC Standard 60529:2020 Degree of Protection IP43 up to IP66.

TMC transformers installed in TMC enclosures are thermally rated in accordance with Annex DD of IEC Standard 62271-202:2014 “HV/LV Prefabricated Substation”.

### IP Ratings

IP is an acronym for “Ingress Protection” developed by the International Electrotechnical Commission and described in IEC Standard 60529 to define protection against objects and water that intrude into the enclosure of any type of equipment.

IEC 60529 defines an enclosure as “a part providing protection of equipment against certain external influences and in any direction protection against direct contact”.

TMC bespoke enclosures can be supplied in a variety of materials and finishes. Enclosure panels on **Indoor Enclosures** are electro-zinc coated, hot galvanized or stainless steel and epoxy powder coated.

Enclosure panels on **Outdoor Enclosures** are heavy gauge hot galvanised or stainless steel and powder coated with UV resistant epoxy or polyester.

The core and coil assembly and removable enclosure panels are mounted on a hot dip galvanised base frame fitted with bi-directional rollers.

IP ratings are formatted as “IP” followed by two digits. The first digit indicates a protection level against solid particles such as dust, and the second digit indicates a protection level against liquids.

IP Code is a designation that indicates the level, or amount of protection and is represented by IP (Ingress Protection) plus two numerals as follows:

FIRST DIGIT	PROTECTION AGAINST FOREIGN OBJECTS	SECOND DIGIT	PROTECTION AGAINST WATER
0	No protection.	0	No protection.
1	Protected against solid objects $\geq 50\text{mm}$ Ø and greater e.g. hands, large tools.	1	Vertically falling drops shall have no harmful effects.
2	Protected against solid objects $\geq 12.5\text{mm}$ Ø and greater e.g. fingers, large tools.	2	Vertically falling drops shall have no harmful effects when the enclosure is tilted at any angle up to $15^\circ$ on either side of the vertical.
3	Protected against solid objects $\geq 2.5\text{mm}$ Ø and greater e.g. wire, small tools.	3	Water sprayed at an angle up to $60^\circ$ on either side of the vertical shall have no harmful effects.
4	Protected against solid objects $\geq 1.5\text{mm}$ Ø and greater e.g. wire, screws.	4	Water splashed against the enclosure from any direction shall have no harmful effects.
5	Limited protection against dust ingress (no harmful deposit).	5	Water projected in jets against the enclosure from any direction shall have no harmful effects.
6	Totally protected against dust ingress.	6	Water projected in powerful jets against the enclosure from any direction shall have no harmful effects.
